Historical Comparison

2- Butoxyethanol use decreased this year, as a result release and recycling amount also decreased. Xylene use slightly decreased. Xylene releases for recycling decreased.

Reduction Plan Objectives and Targets:

Where practical and technically and economically viable, Massilly intends on addressing methods to reduce the use and releases of organic and metallic substances in their facility. Massilly will identify and evaluate practices that will reduce the loss of residues of the subject substances by up to 10 % over the next 2 to 5 years.

Reduction Options Under Consideration for Implementation:

Eliminating base coats on applicable products will result in reduced coating use equating to reduced use and releases of the subject organics substances. Massilly is also considering reusing residual cleaning solvents for the initial equipment cleaning process.

Additional Actions and Their Impact on Substance Use, Creation and Discharge:

Massilly will continue to follow best operating practices by providing Pollution Prevention training/updates for employees.

Amendments or Changes to Toxic Reduction Plans During Report Period:

No amendments or changes have been made to the facility's toxics reduction plans.

Copy of Certification:

As of July 31, 2020, I, Garnet Lasby, certify that I have read the 2019 Accounting report on the toxic substances referred to below and am familiar with its contents, and to my knowledge the information contained in the report is factually accurate and complies with the Toxics Reduction Act 2009 and Ontario Regulation 455/09 (General) made under that Act.
